Form defines function

A recent article in *Feedstuffs* by Dr. Kyle Newman (Venture Laboratories), communicates the importance of evaluating different criteria when selecting a feed ingredient. The primary parameter for selecting a feed ingredient is that it must improve performance. The specific form of a product is directly related to how it will perform in the animal. So, how does 'form define

- Benefits shrimp, fish, lobster and other aquatic animals
- Health and livability
- Production numbers
- Natural seafood marketability

- Foal body condition
- Healthy weight gain

function'?
