

**McNESS BOVA MIN 9 - 510905
FEEDING DIRECTIONS**

McNess Bova Min 9 is formulated to be fed free choice to beef stock cows. It is a complete mineral supplement that supplies the necessary vitamins and minerals cattle normally require.

Consumption should be 2 to 2.7 ounces per head per day so as not to exceed 3 mg. selenium consumption daily.

When fed free choice, it should be fed in a clean, dry feeder preferably near a feed or water source. No more than a 7 to 10 day supply should be put out at one time. This will insure freshness and help to maintain adequate consumption rates.

The location of mineral feeders is very important. They should be located near watering areas. If consumption is low, placing mineral feeders closer to heavily traveled areas may improve consumption.

Consumption patterns will vary with pasture conditions; relocate or adjust mineral feeder numbers and locations to either increase or decrease consumption.

McNess Bova Min 9 can be mixed with grains and/or forages and fed to beef cattle at a rate of 2.7 ounces per head daily.

Do not feed to sheep or other copper sensitive species.

This product was made in a feed manufacturing facility that does not handle or store products containing animal proteins prohibited in ruminant feed.
