**McNESS CUSTOM BOVA MIN 6-BIO  
MOS - 602707  
FEEDING DIRECTIONS**

McNess Custom Bova Min 6-Bio Mos is formulated to be fed free choice to beef stock cows. It is a complete mineral supplement that supplies the necessary vitamins and minerals cattle normally require.

Consumption should be 2 to 2.7 ounces per head per day so as not to exceed 3 mg. selenium consumption daily.

It should be fed in a clean, dry feeder preferably near a feed or water source. No more than a 7 to 10 day supply should be put out at one time. This will insure freshness and help to maintain adequate consumption rates.

The location of mineral feeders is very important. They should be located near watering areas. If consumption is low, placing mineral feeders closer to heavily traveled areas may improve consumption.

Consumption patterns will vary with pasture conditions; relocate or adjust mineral feeder numbers and locations to either increase or decrease consumption.

Do not feed to sheep or other copper sensitive species.

This product was made in a feed manufacturing facility that does not handle or store products containing animal proteins prohibited in ruminant feed.
