Increase Crop Quality with Iron DDP[®]

- Scientifically designed for better plant availability and earlier nutrient uptake
- Guaranteed analysis of 58% iron
- Low levels of heavy metals for greater worker and food safety

More Feeding Sites

With patented EvenCoat[™] Technology, Wolf Trax Iron DDP is coated onto every granule of a fertilizer blend. This results in blanket-like distribution of iron across the field, placing the nutrients closer to plant roots for earlier uptake.

[EvenCoat[™] Technology >](#)

Earlier Uptake

With the *PlantActiv*™ Formulation, the particle size of Iron DDP is designed for earlier plant uptake, and the nutrients are formulated to resist soil tie-up and remain plant-available.

[PLANTACTIV™ Formulation >](#)

Long-Lasting Nutrition

Wolf Trax Iron DDP features DUAL ACTION™ Availability, which provides plants the nutrition they need throughout the growing season. One source of iron is quickly available for plants, while the other source releases more slowly. With this DUAL ACTION Availability, plants benefit from early and prolonged feeding of iron.

The Role of Iron in Crop Production

- Iron is a catalyst of chlorophyll formation
- Iron is vital to photosynthesis

Reasons for Iron Deficiency

- High soil PH
- High phosphate content
- Wet soils

Common Crops Affected

- Soybeans
- Turf/Grass
- Corn
- Cotton
- Small Grains
- Vegetables, Fruit and Potatoes

Visual Deficiency Symptoms

- Bright yellowing between leaf veins while veins remain green on newest growth
- Brown spots on edge of leaf
- Deformation of affected leaves
- Highly branched, short, brown root systems
- Severe, stunted growth
- General chlorosis

Growing Forward™ Guarantee

Wolf Trax DDP Nutrients are guaranteed to correct a nutrient deficiency when applied at the recommended rates, or product will be provided at no cost to you.
